Premium Fence Boards

Quality That Lasts

Master Halco's Magnum® fence board is a premium grade of Latin American pine that is kiln dried for dimensional stability and pressure treated with ACQ (Alkaline Copper Quaternary) to ensure lasting durability and structural integrity. It has a 12-year limited warranty against termite infestation, wood rot, or fungal decay and will perform in its treated state or will accept stain, paint, or waterproof sealers.

Good Looks And Character, Too

Magnum grade characteristics include small knots with occasional scattered spike knots—it's virtually wane free (square edged). Trees for Magnum fencing are grown from specially selected pine seedlings, which are then transplanted to plantations (tree farms) where they are raised and managed as an agricultural crop. Careful attention is given to disease control, nutrition and growth conditions during the life of the tree. The trees are then mechanically harvested to minimize effects on the environment.

ACQ Pressure Treatment

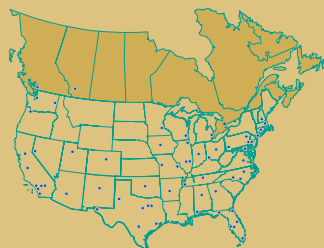

Magnum fence boards are treated with an ACQ preservative which is applied under pressure, penetrating the cells of the wood well below the surface area. This treatment protects the wood from termite infestation and fungal decay which adds years of service life to the product. ACQ features an EPA approved and environmentally advanced formula making it suitable for ecologically sensitive areas.

For best results, stainless steel or hot-dip galvanized fasteners and fittings are recommended. A list of approved hardware is available on the following web site: www.naturewoodproducts.com.

Nationwide Coverage

For more than 40 years, Master Halco has grown to become the largest manufacturer and distributor of fencing materials in the world.
